design and check of reinforced concrete box culverts rectangular single cell enabling crossing below roads and drainage works the analysis model used is that of a thick three dimensional triangular finite element type mesh which considers deformation due to shear they are made up of six nodes at the vertices and mid points of the sides each with six degrees of freedom a mesh is applied on the culvert the spacing of which depending on its dimensions thicknesses and spans by means of a linear elastic analysis eight forces are obtained for each node which are used to check and design the concrete section and reinforcement as well as the displacements other checks that are carried out include deflection ground bearing pressures possible mat foundation uplift etc

this is a study of the analysis and design of reinforced concrete box culverts rcb commonly used as underground conduits in nebraska three major areas were emphasized 1 soil pressures 2 live loads and 3 design procedures

the main purpose of this project is to design a one piece reinforced concrete box culvert and to establish whether it is a viable alternative

to the two piece design currently being used and produced by the roads corporation the design of the one piece box culvert is in accordance with the specifications produced by the national association of the australian state road authorities naasra 1976 road design manual 1985 the australian standards for concrete structures as3600 1988 and finally in accordance with vic roads roads corporation own design specifications conclusions were based upon the overall design of the one piece box culvert taking into account its configuration i e wall thicknesses reinforcement layout the formwork s suitability for repetitive use and in general the work associated with such a culvert design during the manufacturing and installation stages these factors will then be compared to those associated with the current two piece box culvert process to determine whether in fact the one piece is a viable alternative based upon these economic and ergonomic factors synopsis

one of the fast and economical ways of putting tunnels or stream crossings under roadways is to use box culverts box culverts are structurally rigid easy to construct and easy to add length when needed because of their simple geometric configuration precast concrete box culverts with various dimensions are commonly used in the u s in some cases non standard box culverts are also used for which the design document has to be produced per project design specification the design process of box culverts is relatively easy and repetitive

because of their typical geometric configuration in practice engineers are following exactly the same process with different dimensions and loading conditions to design box culverts microsoft excel spreadsheet is therefore often used to speed up this repetitive calculation process in india many designers use staad pro for the structural analysis of box culverts and bring the results of this analysis to a microsoft excel spreadsheet to carry out the remaining calculations however all these cases are dealt separately and a significant amount of time is used to come up with the final design in addition it has been challenging to keep all engineering calculations and drawings of a specific box culvert for its lifecycle one of the solutions that one can come up with for this challenge is to automate the entire design process in one package and keep all design documents in one location this study presents the based application we developed to 1 automate the box culvert design process and 2 keep all design documents in one location this based application is developed based on indian standard codes is and indian road congress codes irc using asp net this study presents how this application was developed how it is working and how it improved the design process of box culverts in our tests this study shows that results obtained from this application are very close to the traditional design process and can be successfully used for designing of box culverts in india also the study concludes that there is a significant amount of time saving in the design process when this application is used instead of traditional design process the electronic version of this dissertation is accessible from hdl handle net 1969 1 155015
