why does rust have both string and str what are the differences between them and when should one be used over the other is one of them getting deprecated

sometimes str and repr are called implicitly meaning they re called on behalf of users when users use print even if they don t call str explicitly such a call is made on their behalf before the object is

i m wondering if there is a more efficient way to use the str contains function in pandas to search for two partial strings at once i want to search a given column in a dataframe for data that contains
