generate arguments and critique claims and evidence because the authors are veteran teachers they designed argument driven inquiry in biology to be easy to use and aligned with today's standards the labs include reproducible student pages and teacher notes the investigations will help your students learn the core ideas crosscutting concepts and scientific practices found in the next generation science standards in addition they offer ways for students to develop the disciplinary skills outlined in the common core state standards many of today's teachers like you want to find new ways to engage students in scientific practices and help students learn more from lab activities argument driven inquiry in biology does all of this even as it gives students the chance to practice reading writing speaking and using math in the context of science

the second world war is often seen as a period of emancipation because of the influx of women into paid work and because the state took steps to relieve women of domestic work this study challenges such a picture the state approached the removal of women from the domestic sphere with extreme caution in spite of the desperate need for women's labour in war work women's own preferences were frequently neglected or distorted in the search for a compromise between production and patriarchy however the enduring practices of paying women less and treating them as an inferior category of workers led to growth in the numbers and proportions of women employed after the war in many areas of work penny summerfield concludes that the war accelerated the segregation of women in inferior sectors of work and inflated the expectation that working women would bear the double burden without a redistribution of responsibility for the domestic sphere between men women and the state first published in 1984 this is an important book for students of history sociology and women's studies at all levels

the evolution of morphological novelties i.e. anatomical structures unique to a taxonomic group is generally associated with changes in developmental mechanisms tunicates the closest relatives of vertebrates have historically had a great conceptual impact on our understanding of the rules that guide a developmental program a broad range of studies have addressed how developmental genes or molecular networks contributed to the evolutionary transition from invertebrates to vertebrates and to the morphological radiation of tunicates in addition tunicate species display several traits of evolutionary interest e.g. solitary or colonial habitus conservative anatomy high genetic polymorphism cryptic speciation different developmental pathways sexual and asexual development whole body regeneration to name a few therefore they offer unique experimental models for exploring levels of evolutionary divergence in

developmental programs behind alternate body plans and for obtaining insight regarding the embryological and evolutionary mechanisms that generate animal diversity the increasing amount of available tunicate genomes and expression data now make feasible efforts to distinguish between homologous convergent or superficially similar gene networks recent evidence indicating that in tunicates there is great variability in the molecular genetics underlying specific characters of interest or developmental programs makes it fundamentally important to reveal which genes or gene modules determine functional and morphological homology moreover the availability of sophisticated techniques of live imaging coupled with facs sorting cell transplantation and transgenic cell labelling make tunicates excellent models for the study of stem cells and their evolutionary traits
