Jones and Bartlett Publishers are proud to continue Dr. Nancy Caroline's legacy by introducing *Emergency Care in the Streets* Canadian Edition. Dr. Caroline's work transformed EMS and the entire paramedic field. She created the first national standard curriculum for paramedic training in the United States. She also wrote the first paramedic textbook, *Emergency Care in the Streets*. In 2007, we welcomed back *Emergency Care in the Streets* with the publication of the sixth edition in the United States. Now, this program has been rewritten and revised by Canadian EMS experts specifically for Canadian paramedics, using the national occupational competency profiles.

The fourth edition of *Our Environment: A Canadian Perspective* continues to provide a contemporary introduction to the social issues behind the scientific concepts that are important to the study and understanding of the ecological functioning of our global environment. The book also aims to present current information on environmental issues we face in Canada from the perspective of sustainability. If Canadian efforts to resolve environmental issues are to succeed, we need to think critically and in an integrated fashion about them and about the relationships between people and Earth's ecosystems. Thus, information presented in the fourth edition integrates physical and human dimensions fully and reflects a broad interdisciplinary approach to the study of global and local environments.

Includes entries for maps and atlases.

Voluntary environmental programs pose a means by which industry, government, and other interested groups can cooperatively agree upon socially acceptable restraints rather than relying on complete government control of environmental laws. Voluntary environmental programs rely on a voluntary system for businesses. They pose their unique problems predicated on the effectiveness of voluntary self-constraint.

Second National State of the Environment Report addressing the questions of what is happening in Canada's environment, why it is happening, why it is significant, and what Canadians are doing about it. The report is divided into five parts: dealing with perceptions of the environment and the dangers inherent in our tendency to look at the world in terms of human economic models; exploring the state of particular environmental components and the major sectors of human activity; describing six regional case studies; addressing six important environmental issues; and discussing the concept of sustainable development and its implications for Canada's future.

this fully revised and updated fifth edition of our environment engages students and encourages them to critically evaluate potential solutions to environmental problems we now face the authors outline specific environmental issues and provide the scientific underpinning required to enable students to understand the complexities at the root of these issues the authors provide many examples of policy success to help students see that environmental concerns are not insurmountable and that a sustainable future is something that can be attained sometimes issues are resolved relatively quickly removal of phosphorus from various detergents or replacements for chlorofluorocarbons for example other issues such as acid rain can take a decade or more to address highly complex issues loss of global biodiversity or global environmental change remain unresolved the text acknowledges that important in moving these issues forward has and will continue to be both environmental professionals and a critically informed public team up with draper and zimmerman s fifth edition of our environment and inspire your students to create a successful future for our environment
